

Digi Setu: An AI-powered Co-pilot for the Modern Professor to enhance learning outcomes

The Challenge Professors Face

College faculty are overwhelmed with the growing demands of preparing, updating, and delivering course materials. Most rely on PDFs, including research articles, lecture notes, and readings, but these static documents aren't built for student engagement.

Turning a PDF into something interactive, accessible, and trackable often requires multiple tools, hours of manual effort, and repetitive work each semester.

Professors are doing more with less: more students, more complexity, and tighter time. Yet their core workflows haven't changed much in over a decade.

- Preparing content takes hours per week per course
- PDFs are static and hard for students to engage with
- Updates and version control are a headache
- There's no easy way to track if students read or understand materials

This is a daily struggle and a huge opportunity.

Our Vision

At Digi Setu, we believe every educator should have the power to turn their teaching materials into engaging, modern learning experiences without having to become a designer or tech expert.

We have a simple yet powerful vision to democratise learning.

Our mission is simple: **make it effortless for professors to convert static content into dynamic, student-friendly modules.**

What Digi Setu Does

Digi Setu is an AI-powered tool that helps professors instantly convert their PDFs into interactive modules with:

- Quizzes and knowledge checks are automatically generated from the material
- Visual mind maps and summaries that simplify complex topics
- Flashcards for quick student review
- Seamless export to LMS platforms like Canvas, Blackboard, and Moodle
- Usage insights to show what students engaged with and what they skipped

It's designed to save professors' time, improve student engagement, and reduce repetitive work. Just upload your document, and Digi Setu takes care of the rest.

Why We're Reaching Out

We're currently working with faculty members across the U.S. to better understand how they prepare and deliver course materials. We're looking to:

- Speak with professors to learn about their current workflows and challenges
- Pilot Digi Setu in real classrooms to improve the product
- Explore partnership opportunities with forward-thinking institutions

If you're open to helping us learn, we'd love to speak with your team or connect with faculty in your institution. Even 20–30 minutes with one or two professors would go a long way.

Get in Touch

If you'd like to help shape the future of instructional content or just want to see what we're building, please reach out. We're happy to share a demo or set up a quick conversation.
